Complete the function solveMeFirst to compute the sum of two integers.
Example
a = 7
b = 3
Return 10.
Function Description
Complete the solveMeFirst function with the following parameters:
int a: the first value
int b: the second value
Returns
- int: the sum of a and b
Constraints
1 ≤ a, b ≤ 1000
Sample Input

bhar34/Digital-Literacy | Digital Literacy Project | CSE0001_Digital_Literac | Untitled document - Go | Simple Array Sum | Hac | Ask Gemini

hackerrank.com/challenges/simple-array-sum/problem

Function Description

Complete the $simpleArraySum$ function with the following parameter(s):

- $ar[n]$: an array of integers

Returns

- int: the sum of the array elements

Input Format

The first line contains an integer, n, denoting the size of the array.

The second line contains n space-separated integers representing the array's elements.

Constraints

$0 < n, ar[i] \leq 1000$

Sample Input

```
STDIN        Function
-----        --------
6            ar[] size n = 6
1 2 3 4 10 11   ar = [1, 2, 3, 4, 10, 11]
```

Sample Output

```
31
```

Explanation

Print the sum of the array's elements: $1 + 2 + 3 + 4 + 10 + 11 = 31$.

Problem Submissions Leaderboard Discussions Editorial

Alice and Bob each created one problem for HackerRank. A reviewer rates the two challenges, awarding points on a scale from 1 to 100 for three categories: problem clarity, originality, and difficulty.

The rating for Alice's challenge is the triplet a = (a[0], a[1], a[2]), and the rating for Bob's challenge is the triplet b = (b[0], b[1], b[2]).

The task is to calculate their comparison points by comparing each category:

- If a[i] > b[i], then Alice is awarded 1 point.
- If a[i] < b[i], then Bob is awarded 1 point.
- If a[i] = b[i], then neither person receives a point.

Example

a = [1, 2, 3]

b = [3, 2, 1]

- For elements *0*, Bob is awarded a point because a[0] < b[0].
- For the equal elements a[1] and b[1], no points are earned.
- Finally, for elements 2, a[2] > b[2] so Alice receives a point.

hackerrank.com/challenges/a-very-big-sum/problem

Problem | Submissions | Leaderboard | Discussions | Editorial

In this challenge, you need to calculate and print the sum of elements in an array, considering that some integers may be very large.

Function Description

Complete the $aVeryBigSum$ function with the following parameter(s):

- $int\ ar[n]$: an array of integers

Return

- $long$: the sum of the array elements

Input Format

The first line of the input consists of an integer n.

The next line contains n space-separated integers contained in the array.

Output Format

Return the integer sum of the elements in the array.

Constraints

$1 \le n \le 10$

$0 \le ar[i] \le 10^{10}$

Sample Input

```
STDIN                          Function
-----                          --------
```
